SUMMARY

Software Engineer with **1 year of full-time experience** at MAQ Software and **1+ year of internship experience**, building scalable backend services and full-stack web applications using Node.js, TypeScript, React, PostgreSQL and Redis. Improved data pipeline speed 6x and developed an LLM-powered AI voice agent. **Immediate joiner.**

EDUCATION

Indian Institute of Information Technology

B.Tech in Computer Science and Engineering

Una, HP

2021 – 2025

EXPERIENCE

MAQ Software

June 2025 – May 2026

Software Engineer I

Noida, India (On-site)

- Secured a multi-tenant monitoring platform by implementing **Microsoft Entra ID** authentication, tenant-scoped request isolation and **role-based access control (RBAC)** for dashboard views and actions.
- Reduced dashboard load time by **75%** (2.4s to 0.6s) by partitioning **PostgreSQL** telemetry tables by day, adding BRIN indexes and serving charts from pre-aggregated minute, hour and day rollups.
- Cut database read load by adding **Redis** query caching with per-granularity TTLs and per-tenant **rate limiting**, preventing one busy tenant from slowing down others.
- Increased telemetry ingestion throughput **6x** by building **Azure Event Hubs** consumers that bulk-load data with PostgreSQL COPY and idempotent upserts, making failed batches safe to retry.

MobiGuest

November 2023 – December 2024

Software Development Intern

Bangalore, India (Remote)

- Reduced manual front-desk work by **60%** by building a 5-step digital guest check-in flow (ID upload, room selection, preferences, payment) in **React** and **Redux** with persisted form state.
- Improved production debuggability by migrating hotel business logic from Firebase Functions to **Node.js REST APIs** with schema validation, standardized responses and structured logging.
- Integrated **30+ REST APIs** into the **Next.js** hotel portal with consistent loading, error and toast states, keeping every screen predictable under slow or failed API calls.
- Built a drag-and-resize QR page builder with React-RND and the **OpenAI API**, enabling hotels to design branded digital menus and guest-service pages with AI-generated backgrounds.

PROJECTS

ShipGoods

May 2026 – Present

Next.js, Node.js, MongoDB, Redis, Socket.IO, Kafka, Groq LLM, Docker, Kubernetes

- Built an **LLM-powered AI voice agent** that calls riders in-app when the driver is 5 km away and on arrival, answering ETA, driver and car-finder questions in Hindi via **Groq function calling** over 6 guarded tools.
- Enabled **horizontal scaling** of real-time driver tracking with the **Socket.IO Redis adapter**, routing location and booking events to per-user and per-driver rooms across all server instances over JWT-authenticated sockets.
- Engineered a **Kafka** pipeline that streams validated driver locations into **MongoDB**, filtering out invalid coordinates and GPS jumps over 5 km, and matched bookings to drivers within 100 km using MongoDB **geospatial queries**.

SKILLS

- Languages:** JavaScript, TypeScript, Java.
- Backend:** Node.js, Express.js, REST APIs, Microservices, Caching, Rate Limiting.
- Frontend:** React, Next.js, Redux, HTML, CSS.
- Databases:** PostgreSQL, MongoDB, MySQL, Redis.
- Messaging & Real-time:** Azure Event Hubs, Kafka, Socket.IO (Redis adapter).
- Cloud & DevOps:** Azure, Firebase, Docker, Kubernetes, Git, Linux.
- AI & LLMs:** AI Agents, LLM Function Calling, MCP, Prompt Guardrails, Groq, OpenAI API, Claude, GitHub Copilot.

ACHIEVEMENTS

- Solved 300+ DSA problems on LeetCode and other platforms – [Profile](#)
