SUMMARY

Software Engineer with 1 year of industry experience and 1.5+ years of internship and freelance experience building scalable backend systems, REST APIs, distributed systems, and frontend applications.

EDUCATION

Indian Institute of Information Technology

B.Tech in Computer Science and Engineering

Una, HP

2021 – 2025

EXPERIENCE

MAQ Software

Software Engineer I

June 2025 – May 2026

Noida, India (On-site)

- Developed **Node.js + TypeScript** backend services with **Fastify** for a multi-tenant monitoring platform, implementing tenant isolation, RBAC, and APIs for utilization and performance metrics.
- Optimized **PostgreSQL** query performance through daily partitioning, BRIN indexing, and minute/hour/day rollups, reducing dashboard query latency from 2.4s to 0.6s (75%).
- Implemented **Redis** result caching with grain-aware TTLs and per-tenant rate limiting, improving dashboard responsiveness and reducing read load on PostgreSQL.
- Built **BullMQ** workers for telemetry ingestion and time-based aggregation using PostgreSQL bulk COPY, watermark-based processing, and idempotent upserts, improving ingestion throughput by 6x and enabling safe retries.
- Developed anomaly detection and short-term forecasting using **EWMA** and **Holt** methods to identify utilization spikes and provide 90-minute early warnings, supporting proactive capacity management and workspace-level cost attribution.

MobiGuest

Software Development Intern

November 2023 – December 2024

Bangalore, India (Remote)

- Developed a 5-step guest check-in workflow using Redux, managing persistent application state across personal details, document submission, room selection, preferences and payment.
- Migrated business logic from Firebase Functions to **Node.js REST APIs**, restructuring services with schema validation, standardized HTTP responses and structured logging for improved maintainability and observability.
- Integrated 30+ REST APIs into a **Next.js** frontend, implementing asynchronous data handling, error states and toast notifications for reliable API-driven interactions.
- Developed responsive, interactive QR experiences using React-RND and OpenAI APIs, enabling hotels to create customizable interfaces for digital menus and guest services.

PROJECTS

ShipGoods

Next.js, Node.js, MongoDB, Redis, Kafka, Socket.IO

October 2024 – November 2024

- Developed 8 booking-related API workflows covering shipment creation, scheduling, driver assignment, status updates, payments, and ratings using **Node.js/Express**, connecting individual APIs into end-to-end logistics workflows.
- Engineered real-time driver tracking using **Kafka** for asynchronous location-event processing and **Socket.IO + Redis** for live updates and driver/user session mapping, supporting continuous fleet visibility across a 100 km driver-search radius.

SKILLS

- Languages:** JavaScript, TypeScript, Java.
- Backend:** Node.js, Fastify, Express.js, REST APIs, Microservices.
- Databases:** PostgreSQL, MongoDB, MySQL, Redis.
- Distributed Systems:** BullMQ, Kafka, Socket.IO, Caching, Rate Limiting.
- Cloud & DevOps:** Azure, Firebase, Docker, Kubernetes, Git, Linux.

ACHIEVEMENTS

- Solved 300+ DSA problems on LeetCode and other online platforms – [Profile](#)
