Himanshu Singh

Noida, India +91-6386845325 Himanshu638684@gmail.com linkedin.com/in/Himanshu255 github.com/Himu25

Summary

Backend-focused Software Engineer with 1 year at MAQ Software and 1+ year of internships, specializing in Node.js, TypeScript, PostgreSQL and Redis. Experienced in REST APIs, multi-tenant systems, Kafka and LLM-powered agents. Immediate joiner.

Education

Indian Institute of Information Technology — Una, HP
B.Tech in Computer Science and Engineering — *2021 – 2025*

Experience

MAQ Software — June 2025 – May 2026
Software Engineer I — *Noida, India (On-site)*

- Built **10+ REST APIs** in **Node.js and TypeScript** serving dashboard charts for capacity utilization, workspace usage, throttling, top consumers and operation trends, with time-range filters and request validation.
- Secured the multi-tenant platform with **JWT authentication** middleware, tenant-scoped request isolation and **role-based access control (RBAC)** on API routes and dashboard actions.
- Cut dashboard query latency by 75% (2.4s to 0.6s) using **PostgreSQL** daily partitioning with **partition pruning** to skip irrelevant days, plus **BRIN indexes** for time-range scans.
- Reduced database read load with a **Redis cache-aside** strategy, TTLs and cache invalidation on data refresh; added per-tenant **rate limiting** so one busy tenant cannot slow others.

MobiGuest — November 2023 – December 2024
Software Development Intern — *Bangalore, India (Remote)*

- Reduced manual front-desk work by 60% by building a 5-step digital guest check-in flow (ID upload, room selection, preferences, payment) in **React and Redux** with persisted form state.
- Improved production debuggability by migrating hotel business logic from Firebase Functions to **Node.js REST APIs** with schema validation, standardized responses and structured logging.
- Integrated 30+ REST APIs into the **Next.js** hotel portal with consistent loading, error and toast states, keeping every screen predictable under slow or failed API calls.
- Built a drag-and-resize QR page builder with React-RND and the **OpenAI API**, enabling hotels to design branded digital menus and guest-service pages with AI-generated backgrounds.

Projects

ShipGoods — May 2026 – Present
Next.js, Node.js, MongoDB, Redis, Socket.IO, Kafka, Groq LLM, Docker, Kubernetes

- Built an **LLM-powered AI voice agent** that calls riders in-app when the driver is 5 km away and on arrival, answering ETA, driver and car-finder questions in Hindi via **Groq function calling** over 6 guarded tools.
- Enabled horizontal scaling of real-time driver tracking with the **Socket.IO Redis adapter**, routing location and booking events to per-user and per-driver rooms across all server instances over JWT-authenticated sockets.
- Engineered a **Kafka** pipeline that streams validated driver locations into MongoDB, filtering out invalid coordinates and GPS jumps over 5 km, and matched bookings to drivers within 100 km using MongoDB geospatial queries.

Skills

- **Languages**: JavaScript, TypeScript, Java.
- **Backend**: Node.js, Express.js, REST APIs, JWT, Microservices, Caching (Cache-Aside), Rate Limiting.
- **Frontend**: React, Next.js, Redux, HTML, CSS.
- **Databases**: PostgreSQL, MongoDB, MySQL, Redis.
- **Messaging & Real-time**: Kafka, Socket.IO (Redis adapter).
- **Cloud & DevOps**: Azure, Firebase, Docker, Kubernetes, Git, Linux.
- **AI & LLMs**: AI Agents, LLM Function Calling, MCP, Prompt Guardrails, Groq, OpenAI API, Claude, GitHub Copilot.

Achievements

- Solved 300+ DSA problems on LeetCode and other platforms – Profile
